

Harvest	
PK	<u>harvestId</u>
FK	dateTime
FK	plantId
	numHarvest
	numViable
	numWaste

The diagram shows three tables: Harvest, Sown, and PlantType. Harvest has a primary key harvestId and foreign keys dateTime and plantId. Sown has a primary key sownId and foreign keys dateTime and plantId. PlantType has a primary key plantTypeId. Harvest is connected to Sown by a line from its dateTime field to Sown's dateTime field. Harvest is connected to PlantType by a line from its plantId field to PlantType's plantTypeId field. Both connections have a crow's foot notation at the PlantType end, indicating a one-to-many relationship.

Sown	
PK	<u>sownId</u>
FK	dateTime
	numHarvest
	wasteAmount
	windSpeed

PlantType	
PK	<u>plantTypeId</u>
	plantName
	plantType
	daysToHarvest
	description
	bloomInitiatedBy
